

PRODUCT MANAGEMENT / TECHNICAL PRODUCTS

Alireza Nobakht

Associate Product Manager | Technical Product Candidate

E alireza.nobakht2004@gmail.com M (+98) 910-977-7936 L Tehran, Iran

GH github.com/alirezanobakht2004 IN www.linkedin.com/in/alireza-nobakht-work W Portfolio

PROFESSIONAL PROFILE

Technical product candidate with **3+ years of software-engineering experience** across backend, mobile, web, embedded, and geospatial products. Strong at translating field constraints into requirements, workflows, API behavior, and delivery trade-offs. Combines hands-on engineering depth with product thinking to communicate with developers, evaluate feasibility and risk, define acceptance criteria, and support measurable outcomes. Target path: **Associate Product Manager / Technical Product Owner (TPO)**.

01 PRODUCT MANAGEMENT & TECHNICAL CAPABILITIES

PRODUCT DISCOVERY & RESEARCH

Problem framing, user needs, personas, journey mapping, value propositions, workflow analysis, competitor research, and market awareness

REQUIREMENTS & SCOPE

Requirement clarification, user stories, acceptance criteria, feature decomposition, API and workflow specifications, scope and dependency awareness

PLANNING & PRIORITIZATION

Backlog and roadmap concepts, impact-versus-effort thinking, release planning, risk identification, trade-off communication, iterative delivery

TECHNICAL PRODUCT DELIVERY

Backend, mobile, web, embedded systems, APIs, databases, architecture discussions, feasibility analysis, and integration planning

DATA, QUALITY & OUTCOMES

KPI and product-metric foundations, performance analysis, validation, reliability, root-cause investigation, measurable continuous improvement

COMMUNICATION & FACILITATION

Technical documentation, stakeholder communication, mentoring, structured presentations, cross-functional collaboration, clear decision context

02 PRODUCT-RELEVANT EXPERIENCE

Backend Developer & Software Engineer

Aug 2026 - Present

Tadbir Afzar Poshtiban Tec (Top Tec) | toptech.ir | MVM Group | Tehran, Iran | Full-time, On-site

- **Work on EPC ERP projects**, primarily in engineering with some commercial workflows; use ASP.NET Core, C#, EF Core, and SQL Server while building domain knowledge in legal, financial, and contractual processes.
- **Company focus:** automotive ERP and the Hayvo cloud-accounting platform, with integrated finance, inventory, purchasing, sales, production, contract, CRM, and after-sales workflows.

Software Developer & Embedded Systems Engineer

Sep 2023 - Aug 2026

Hiromap (Hirongar Pars Company) | hiromap.com | Tehran, Iran

- **Translated field and operational needs into software workflows** for geospatial data, navigation, device configuration, and connected-system products.
- **Connected 3 technical platforms** - STM32 firmware, Android applications, and desktop software - requiring dependency management, interface alignment, and end-to-end delivery thinking.
- **Shaped admin and API workflows across 4 operational areas**: users, services, configurations, and role-based access, improving clarity and maintainability of the product experience.
- **Improved measurable product quality** by reducing API response time by 40%, supporting 99.5% reported availability, and reducing manual field-entry errors by 40%.
- **Balanced user constraints with technical feasibility**, including low-connectivity field work, offline synchronization, real-time validation, serial communication, and secure large-file transfer.
- **Produced documentation and diagnostic tooling** that helped technical teams understand system behavior, troubleshoot issues, and make more informed implementation decisions.

Technical Instructor & Educational Consultant

Aug 2022 - Jun 2023

Ghalamchi Educational Institute | Tehran, Iran

- **Managed structured learning plans during a 10-month engagement**, adapting content and exercises to different learner needs and progress levels.
- **Facilitated communication, feedback, and problem solving** across programming fundamentals, algorithms, and software-development practices.

SELECTED PRODUCT-ORIENTED WORK

Problems, Users, Delivery & Outcomes

Engineering projects reframed through product thinking, workflow design, prioritization, and measurable outcomes.

ASSOCIATE PRODUCT MANAGER
TECHNICAL PRODUCT PATH

Geospatial Data Management Platform

Apr 2025

Centralized survey-data and map workflow

Workflow Design · Requirements · Spring Boot · PostGIS · Map UX

- **Problem:** survey teams needed a consistent way to store, retrieve, process, and visualize coordinates, measurements, and topographic layers.
- **Product contribution:** defined upload, processing, retrieval, project, and map-rendering workflows across backend and web interfaces.
- **Delivery:** implemented Spring Boot services, Hibernate-backed data access, spatial indexing, and React with Leaflet/OpenLayers for interactive layers.
- **Value:** improved access to large geospatial datasets and made field information easier to manage, review, and reuse.

Field Survey Data Collection App

Jul 2024

Offline-capable workflow for field engineers

User Workflow · Offline Strategy · Android · REST · Validation

- **User constraint:** field teams needed reliable data capture despite weak or unavailable connectivity.
- **Product contribution:** structured the journey for recording coordinates, notes, images, validation states, and later synchronization with a central service.
- **Delivery:** implemented GPS tracking, local caching, secure REST sync, and administration workflows for projects, users, and reports.
- **Outcome:** real-time validation and coordinate-correction logic reduced manual input errors by **40%**.

Travel Reservation Platform

May 2025

Multi-role, multi-modal booking experience

- **Modeled end-to-end journeys** for 3 transportation modes and 3 roles: Admin, User, and Vendor.
- **Decomposed complex workflows** into versioned APIs, permissions, standardized errors, and offline-capable mobile integration.
- **Improved performance by 60%**, from 450 ms to 180 ms, while targeting 10k+ concurrent users.

3	3	60%
transport modes	user roles	faster response

Journey Mapping · Role Design · APIs · Redis

Connected Data & File Transfer

2024 - 2025

Cross-platform reliability and delivery

- **Coordinated a workflow across firmware, Android, and desktop systems**, with clear interface and reliability requirements.
- **Designed user-facing transfer behavior** including progress, resume, retry, alerts, configuration, and large-file chunking.
- **Reached 99.5% transfer success** and 35% faster transfers for files larger than 100 MB.

3	99.5%	35%
platforms	success rate	faster transfer

Technical Scoping · Reliability · Android · Embedded

EDUCATION

M.Sc. Software Engineering

Amirkabir University of Technology
Oct 2026 – Present · In progress

Graduate study builds on a computer engineering foundation, informed by 3+ years delivering backend systems and enterprise software.

B.Sc. Computer Engineering

K.N. Toosi University of Technology
Sep 2022 – Sep 2026 · Graduated
GPA: 18.31 / 20

Teaching Assistant for core programming courses. B.Sc. study areas: software engineering, databases, algorithms, operating systems, networks, and embedded systems.

PRODUCT CAREER DIRECTION

Intentional transition into product management

Seeking an Associate or Assistant Product Manager role focused on discovery, prioritization, roadmap support, stakeholder communication, and measurable delivery.

Long-term path: Technical Product Owner (TPO) / Technical Product Manager, combining product judgment with hands-on engineering fluency.

TECHNICAL FOUNDATION

Engineering-fluent product candidate

Java, Spring Boot, C#/.NET, REST APIs, SQL, Redis, Android, React, Docker, Git, STM32, GPS/IMU, real-time and connected systems.

Persian - Native
English - Intermediate / Professional

DISCOVERY INPUTS

User constraints, workflow pain points, field feedback, and acceptance criteria.

WORKFLOW DESIGN

Journey mapping, role behavior, state handling, and edge-case clarification.

DELIVERY SUPPORT

Technical scoping, dependency tracking, API behavior, and release-risk awareness.

OUTCOME FOCUS

Performance, reliability, validation, error reduction, and operational usability.
